

Your choice of masonry can be used for cabinet construction for the built-in gas grill; however it must be **non-combustible** material. Keep in mind when choosing a location for your grill that it should **NOT** be located under any overhead combustible construction.

COUNTERTOP OVERHANG

The control panel is designed to sit flush against the enclosure front wall. If the **non-combustible enclosure** countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side grill fire walls. See illustrations below.
